It was such a lovely day on Sunday, 22 Feb. that I just had to go fishing.

Arrived at Diver shortly after 1 p.m. No one else on the lake but a couple on the float. The solunar table said there was to be a "major bite" at about 2 p.m.

Tried a black, a red, and an olive Doc. Sprately as well as a sparkle leach, a bead headed minkie and a brown boobie. Finally at about 2:30 p.m. I bagged a "monster" (9 inches) on the brown boobie which just goes to prove that even fish are partial to boobies.

Water temp. was 47°F. I didn't see any surface activity aside from a large otter but a fellow on the float said that there were some jumpers in the morning.

Cheers, Basher
